MODEL: PEPCOweb

PEPCO WEB HOSTING allows a user to remotely access PEPCO's products using a simple Web Browser. The level of access can be customized for a specific user.

The user logs onto a standard web browser such as Explorer or Firefox and types in the IP of the system they wish to log on to. The log-in screen appears and the user types in their username and password. User password limits access to specific graphics and date. Monitoring and Control parameters including temperature set points, lead/lag, alarms and historical trends can be viewed and changed from easy to use color graphic screens.
